PACKAGE 04

Attendance System Kiosk

Biometric or QR-based attendance with instant app notifications.

An attendance kiosk is the school's on-campus check-in point for capturing identity and attendance events through QR, biometric, or guided self-service access.

FEATURES

- Biometric or QR check-in for daily student attendance and gate entry validation.
- Instant app notifications for time-in, late status, absences, and attendance-related events.
- Attendance logs, dashboard monitoring, and schedule-aware entry control for school operations.

ARCHITECTURE

- Campus LAN or secure Wi-Fi kiosk connection with optional cloud relay for notifications.
- Attendance API with device registry, schedule matching, event logs, and notification triggers.
- Same shared backend and student database can later expose profiles, grades, or payment touchpoints at the kiosk, with offline sync for delayed upload recovery.

Package Comparison

	SIS	LMS	PORTAL	KIOSK
Student records and admin workflows	✓	✓	✓	+
Lessons and assessments	×	✓	×	×
Grade and report access	✓	✓	✓	+
School webpage or portal connection	+	✓	✓	×
App or notification layer	×	✓	✓	✓

✓ included now. + can be added later on the same shared platform. × not part of the current package scope.

LAST PAGE

Deployment + Options

Packages may be quoted separately, but they still run on one school platform with shared records, shared APIs, and upgrade-ready modules.

One Shared Architecture

These packages are quoted separately, but technically they are planned as one connected school platform.

- One backend and API layer can serve SIS, LMS, Portal, App, Webpage, and Kiosk services.
- One central student database keeps records, grades, billing, attendance, and history aligned across modules.
- Shared school data reduces duplication for office staff, faculty, students, parents, and future services.

Flexible Rollout and Growth

A school may start with only the needed package, then activate more modules later without rebuilding the system.

- Features can be stripped down by contract while keeping the same backend and deployment direction.
- The kiosk can later show biographic information, grade lookup, account touchpoints, or guided payment services.
- Portal, mobile app, and official school webpage can stay connected to the same academic and operational records.

Best value is achieved when more modules are adopted together, but phased deployment is fully supported.

Pricing + deployment note

- Quotation should separate initial deployment and materials, go-live completion cost, and monthly maintenance.
- Final price varies by hosting, campus networking, biometric or kiosk hardware, webpage scope, and mobile app scope.
- Deployment can be phased, but the shared backend, database, and future integrations are planned from day one.

For quotation and more details: the platform can be launched package by package while remaining one connected system.

INTEGRATED SCHOOL SYSTEMS

SYSTEM PROPOSAL BROCHURE

School Information and Learning Platform

Four packages covering office operations, online learning, portal access, and kiosk attendance on one shared backend.

4 FLEXIBLE PACKAGES

SIS ·LMS ·PORTAL ·KIOSK

PACKAGE 01

SIS Core

Admin, Registrar, Cashier, and Faculty in one shared system.

SIS means Student Information System, the school's main operations platform for records, enrollment, billing, grading, and day-to-day office workflows.

FEATURES

- Enrollment flow, student permanent records, sectioning, schedules, billing, payments, and grading.
- Role-based access for admin, registrar, cashier, and faculty with one shared student master record.
- Operational handling of biographic data, academic records, report generation, and internal office workflows.
- Can be paired with an official school webpage for admissions, announcements, and public-facing school information.

ARCHITECTURE

- Campus LAN deployment with local server, secured staff workstations, and office networking setup.
- Shared SIS API, centralized student database, cashiering services, and grade storage.
- Audit logs, backups, and centralized data access for registrar, cashier, and faculty operations.

Deployment Layers

	SIS	LMS	PORTAL	KIOSK
Campus LAN / local deployment	✓	✓	✓	✓
Hybrid or cloud-ready hosting	×	✓	✓	✓
Internet-facing service layer	×	✓	✓	✓
Offline sync safeguard	×	×	×	✓

Deployment layers differ, but all packages can still connect to one backend and one database.

PACKAGE 02

SIS + LMS

Adds lessons and assessments that students answer through app or web access.

LMS means Learning Management System, the online teaching layer where teachers publish lessons, activities, assessments, and student submissions.

FEATURES

- Teacher lesson publishing, digital activities, quizzes, assessments, submissions, and grading sync.
- Student answering flow through app or web access with activity completion tied to class records.
- Online learning workflows connected to the same academic record, grading, and curriculum progress data.
- Can include student-facing mobile app access and public school webpage integration for announcements and entry links.

ARCHITECTURE

- Hybrid or cloud hosting with stable internet access, secure user access, and learning-file storage.
- SIS Core backend extended with LMS services, content delivery, assessment engine, and submission handling.
- Integrated notification flow for teacher and student activity updates with synced academic results.

Academic Scope

	SIS	LMS	PORTAL	KIOSK
Biographic student information	✓	✓	✓	×
Report cards and grade viewing	✓	✓	✓	×
Curriculum progression tracking	✓	✓	✓	×
Lesson delivery and activities	×	✓	×	×
Online assessments and submissions	×	✓	×	×

LMS adds the full lesson and assessment layer while keeping the same academic record base.

PACKAGE 03

SIS + Portal

Online access without lessons or assessment delivery.

A portal is the secure student and parent access layer for viewing school records, grades, reports, and progress without the full lesson-delivery tools of an LMS.

FEATURES

- Faculty grading and grade release through portal-connected workflows without using the LMS lesson and assessment layer.
- Student and parent access to report cards, biographic information, transcript of records, curriculum progression, academic history, and school record viewing.
- Can include app-ready access for students and parents plus a school webpage that links directly to the portal.

ARCHITECTURE

- Secure hybrid or cloud deployment for off-campus portal access through browser or mobile-ready entry points.
- Connected directly to SIS records, curriculum data, grade publishing, transcript lookup, and report card services used by school staff.

Extensions and Access

	SIS	LMS	PORTAL	KIOSK
Official school webpage option	✓	✓	✓	×
Mobile app / push notification layer	×	✓	✓	✓
Parent/student record access	×	+	✓	+

Portal access opens the school records outward without requiring the full LMS lesson workflow.

Portal note: this package is ideal for schools that want online grade and record access without the full LMS lesson and assessment layer.
